The **JIMCO** weatherproof sound attenuated enclosures have all been designed and developed by our specialist acoustic engineers to attain optimal sound level reductions to comply with the new European Community regulations 2000/14/EC which became effective on 1 January 2002.

These enclosures are of rugged construction and have been tested and proven to withstand extremely harsh and corrosive weather conditions and the rough handling conditions common on many construction sites.

The **JIMCO** enclosures are of high quality and durability and are tested according to ISO 9001:2000 and European Standards.

200 - 800 kVA Range

Sound Level Attenuation Average

- 68dba@1m in open space

Features

- Robust/Highly Corrosion resistant construction
- Chrome Plated stainless steel locks and hinges
- Insulation material consisting of one 6.5cm layer of fiber glass, high density of 32kg/m3 covered by a smooth liner
- Metal belts insulation fitting
- Insulated floor canopy and reinforced with I beam
- Paint smoothened, undercoated & treated with anti-rust double coat of durable primer, finished with high quality synthetic paint.
- Canvas bellows between radiator and outlet baffle
- Air inlet and outlet baffle dimensions for air circulation designed according to genset rating

Excellent Access

- Full length extra wide doors on each side
- Lube oil and cooling water drains piped to exterior of the enclosure
- Openings for fuel feed and return

Security and Safety

- Control panel viewing window
- Emergency stop push button (red) mounted on enclosure exterior
- Cooling fan and battery charging alternator fully guarded
- Fuel fill and battery can only be reached via lockable access doors
- Exhaust silencing system totally enclosed for operator safety
- Roof-top mounted critical residential exhaust silencing system

Transportability

- Roof-top lifting points

SS2 Soundproof Enclosure

ISO 9001:2000

In line with our policy of continuous product development, we reserve the right to change specification without notice.
